Listing of Claims:

Claims 1-6 (canceled)

Claim 7 (currently amended) A multiple layer identity card of plastic comprising:

at least one card core layer (1A) having at least one adhesive coating (1A0) applied on one side and on which a printed layer (1A1) is located,

a further adhesive coating (1B0), which is applied between the printed layer (1A1) and a covering layer (1B),

characterized in that

the adhesive coatings (1A0 and 1B0) comprise at least one additive (Z) selected from the group consisting of silica (SiO_2), a silicate, and calcium carbonate ($CaCO_3$), which increases the friction between the covering layer (1B) and the printed card core (1A).
